

## Online Tool to compare cultural dimensions between the countries

Professor Geert Hofstede has developed an **online tool** to compare countries based on **six different cultural dimensions**: *Power Distance, Individualism, Masculinity, Uncertainty Avoidance, Long Term Orientation and Indulgence*. The tool can show the score when comparing two or a maximum of three countries at the same time.

The scores demonstrate the differences between national cultures and open the discussion on other cultural differences, too. Observing cultural differences helps to prevent conflicts at the workplace and solves possible conflict situations. If there are different nationalities in the group, you can choose the countries for that specific case accordingly.

The tool is available on the web page:
